The following functions are for reference only. Some series products may not support all the functions listed below.

1 Network Connection

This series IPC product support the Web access and management via PC.

Web includes several modules includes monitor channel preview, PTZ control, system configuration, alarm and etc.

Please follow the steps listed below for network connection.

- Make sure the IPC has connected to the network properly.
- IPC IP address and PC IP address shall be in the same network segment. If there is router, please set the corresponding gateway and subnet mask.
- Use order ping ***.***.***(* IP camera address) to check connection is OK or not.

2 Main Interface Introduction

2.1 Log in

Open IE and input IP camera address in the address bar.

For example, if your camera IP is 192.168.1.108, then please input http:// 192.168.1.108 in IE address bar. See Figure 2-1.

Figure 2-1 IE

The login interface is shown as below. See Figure 2-2.

Please input your user name and password.

Default factory name is **admin** and password is **admin**.

Note: For security reasons, please modify your password after you first login.

Figure 2-2 Login Interface

If it is your first time to login in, system pops up warning information to ask you whether install control webrec.cab or not. Please click OK button, system can automatically install the control. When system is upgrading, it can overwrite the previous Web too.

If you can't download the ActiveX file, please check whether you have installed the plug-in to disable the control download. Or you can lower the IE security level. See Figure 2-3.

Figure 2-3 Security Settings

2.2 Live Interface

After you logged in, you can see the live monitor window. See Figure 2-4.

Figure 2-4 Live Interface

There are four sections:

- Section 1: Encode setup bar
- Section 2: System menu
- Section 3: Window function option bar
- Section 4: Window adjust bar

2.3 Encode Setup

The encode setup interface is shown as in Figure 2-5.

Figure 2-5 Encode setup

Parameter	Function
Main stream	In normal network width environment, main stream can record audio/video file and realize network monitor. You can set the main stream resolution if your device supports.
Sub (Extra) stream	If network width is not sufficient, you can use sub stream to realize network monitor.
Protocol	You can select stream media protocol from the dropdown list. There are three options: TCP/UDP/Multicast

Please refer to the following sheet for detailed information.

2.4 System Menu

System menu is shown as in Figure 2-6.

Please refer to chapter 2.2 Live, chapter 3 PTZ, chapter 4 Setup, chapter 5 Alarm, chapter 6 Log out for detailed information.

	Live	РТZ	Setup	Alarm	Logout
--	------	-----	-------	-------	--------

Figure 2-6 System Menu

2.5 Video Window Function Option

The interface is shown as below. See

Figure 2-7.

Figure 2-7 Video Window Function

SN	Parameter	Function
1	Alarm output	Click it to generate an alarm output.
2	Digital zoom	Click this button and then left drag the mouse in the zone to zoom in. Right click mouse system restores original status.

3	Snapshot	You can snapshoot important video. All images are memorized in system folder: \ picture download (default). You can go to Setup->Camera->Video->Path to modify the local record save path
4	Record	When you click local record button, the system begins recording. The recorded file is saved to system folder: \ RecordDownload(default).
		You can go to Setup->Camera->Video->Path to modify the local record save path.
5	Audio output	Turn on or off audio when you are monitoring. Some series product does not support this function.
6	Bidirectional talk	Click it to begin audio talk. You can go to Setup->Camera- >Audio to set bidirectional talk mode.
		Some series product does not support this function.

2.6 Video Window Setup

The interface is shown as in Figure 2-8.

Figure 2-8 Video Window Setup

Please refer to the following sheet for detailed information.

SN	Parameter	Function
1	Image control	Click it to open picture setup interface. See Figure 2-9. This interface is on the top right pane.
2	Original size	Click this button to go to original size. It is to display the actual size of the video stream. It depends on the resolution of the bit stream.
3	Full screen	Click it to go to full-screen mode. Double click the mouse or click the Esc button to exit the full screen.
4	Width and height ratio	Click it to restore original ratio or suitable window.

The picture setup interface is shown as in Figure 2-9.

Figure 2-9

Parameter		Function	
Video setup	¥	It is to adjust monitor video brightness.	Note: • All the operations here
	igodot	It is to adjust monitor video contrast ness.	 apply to WEB end only. Please go to Setup-
	۹	It is to adjust monitor video saturation.	>Camera->Conditions to adjust
	1	It is to adjust monitor video hue.	corresponding items.
	Reset	Restore brightness, contrastness saturation and hue to system default setup.	

3 PTZ Control

Please note some series product does not support this function.

Before PTZ operation, please make sure you have properly set PTZ protocol. (Please go to Setup->System->PTZ to set.).

Here you can view direction keys, speed, zoom, focus, iris, preset, tour, pan, scan, pattern, aux close, and PTZ setup button. See Figure 3-1.

- PTZ direction: PTZ supports eight directions: left/right/up/down/upper left/upper right/bottom left/bottom right.
- Speed: The step 8 speed is faster than step 1.

Figure 3-1 PTZ Interface

Click PTZ set button, the interface is shown as in Figure 3-2.

PTZ Settings			×

Light Wiper	Turn on	Turn off	

Figure 3-2 PTZ Setup

Please refer to the following sheet for PTZ setup information.

Parameter	Function
Scan	 Move the camera to you desired location and then click left limit button. Then move the camera again and then click right limit button to set a right limit.
Preset	Use direction keys to move the camera to your desired location and then input preset value. Click add button, you have set one preset. The preset value ranges from 1 to 80. (It may vary due to different protocols.)
Tour	 Input auto tour value and preset value. Click add button, you have added one preset in the tour. Repeat the above procedures you can add more presets in one tour. Or you can click delete button to remove one preset from the tour. The tour value ranges from 1 to 255. (It may vary due to different protocols.)

Parameter	Function
Pattern	You can input pattern value and then click start record button to begin PTZ movement. Please go back to Figure 3-1 to implement camera operation. Then you can click stop record button in Figure 3-2. Now you have set one pattern.
Assistant	The assistant items include: BLC, Digital zoom, night vision, camera brightness, flip.
	You can select one option and then click start or stop button.
Matrix	Please select the matrix X, and then input the corresponding monitor output number, video input channel number, and then you can click video switch button to complete the operation.
Light and wiper	You can enable or disable the light/wiper.

4 Setup

4.1 Camera

4.1.1 Conditions

Here you can view device property information. Slight differences may be found due to different IPC series. The setups become valid immediately after you set. See Figure 4-1.

Figure 4-1

Parameter	Function
Brightness	It is to adjust monitor window bright. The value ranges from 0 to 100. The default value is 50.
	The larger the number, the bright the video is. When you input the value here, the bright section and the dark section of the video will be adjusted accordingly. You can use this function when the whole video is too dark or too bright. Please note the video may become hazy if the value is too high. The recommended value ranges from 40 to 60.

Contrast	It is to adjust monitor window contrast. The value ranges from 0 to 100. The default value is 50.						
	The larger the number, the higher the contrast is. You can use this function when the whole video bright is OK but the contrast is not proper. Please note the video may become hazy if the value is too low. If this value is too high, the dark section may lack brightness while the bright section may over exposure .The recommended value ranges from 40 to 60.						
Hue	It is to adjust monitor window hue. The value ranges from 0 to 100. The default value is 50.						
	The input value will adjust the hue but has no effect on the general brightness of the whole video. Such as turn the red color to the blue color. There is a default value according to the sensitization of the sensor. Usually you do not need to do some major setup. The recommended value ranges from 40 to 60.						
Saturation	It is to adjust monitor window saturation. The value ranges from 0 to 100. The default value is 50.						
	The larger the number, the strong the color is. This value has no effect on the general brightness of the whole video. The video color may become too strong if the value is too high. For the grey part of the video, the distortion may occur if the white balance is not accurate. Please note the video may not be attractive if the value is too low. The recommended value ranges from 40 to 60.						
Gain Mode	There are two options: manual/auto.						
Gain Adjust	The gain adjust is to set the gain value. The default value may vary due to different device models. The smaller the value, the low the noise. But the brightness is also too low in the dark environments. It can enhance the video brightness if the value is high. But the video noise may become too clear.						
Exposure Mode	There are two modes: Auto exposure (AE) and Manual exposure (ME).						
	There are several values for the manual exposure mode. You can select from the dropdown list, It support the long exposure. It supports customized setup too. The device can auto exposure according to the exposure time you set here. The value ranges from 0.1 to 80ms. The exposure time is fixed if the max and min value are the same.						
	Customized value: System can auto exposure according to the value you set here. The value ranges from 0.1 to 80ms.						

Auto Iris	Before the setup, please make sure you have installed the auto iris.
	You can check the box before ON to enable this function. The auto iris may change if the light becomes different.
	When you disable this function, the iris is at the max. System does not add the auto iris function in the exposure control.
	This function is on by default.
	Some series product does not support this function.
Scene Mode	It is to set the white balance mode. It has effect on the general hue of the video. This function is on by default.
	You can select the different scene mode such as auto, sunny, cloudy, home, office, night, disable and etc to adjust the video to the best quality.
	• Disabled: The white balance function is off. The video will be output at the original color.
	• Auto: The auto white balance is on. System can auto compensate the color temperature to make sure the vide color is proper.
	• Sunny: The threshold of the white balance is in the sunny mode.
	 Night: The threshold of the white balance is in the night mode.
	• Customized: You can set the gain of the red/blue channel. The value reneges from 0 to 100.
Day/Night Mode	It is to set device color and the B/W mode switch. The default setup is on.
	Color: Device outputs the color video.
	• Auto: Device auto select to output the color or the B/W video according to the device feature (The general bright of the video or there is IR light or not.)
	• B/W: The device outputs the black and white video.
	• Switch by periods: You can se the day/night mode switch time. For example, you can set the sunrise time as 06:00:00 and the sunset time as 18:00:00. The video in the specified period will be color while the video in the rest period will be black and white.
BLC	This function can make the target clearer. It can make the details of the dark section become clear when the background is too bright.
	This function is disabled by default.

Flip	It is to switch video up and bottom limit. This function is disabled by default.
Mirror	It is to switch video left and right limit.
	This function is disabled by default.
	Some series product does not support this function.

4.1.2 Video

4.1.2.1 Video bit stream

The video bit stream interface is shown as below. See Figure 4-2.

WEB SERVIC	E v3:0			Live	PTZ	Setup	Alarm	Logout
Camera Conditions Video Audio Network Event Storage System Information	Video Main Stream Code-Stream Type Encode Mode Resolution Frame rate(FPS) Bit Rate Type Reference Bit Rate Bit Rate I Frame Interval Watermark Settings Watermark Character	Snapshot General H.264 1080P (1920*1080) 25 CBR 3584-8192Kb/S 8192 50 DigitalCCT√	Overla	Live ay Sub Streat Code-Str Encode I Resoluti Frame ra Bit Rate I Frame I Save	PTZ Path m eam Type dode on te(FPS) Type e Bit Rate nterval	Setup General H.264 CIF (352*288) 6 CBR 48-256kb/S 80 12	Alarm ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓ ✓	Logout

Figure 4-2

Parameter		Function					
Main stream	Bit stream type	It includes general stream, motion stream and alarm stream. You can select different encode frame rates form different recorded events.					
		System supports active control frame function (ACF). It allows you to record in different frame rates.					
		For example, you can use high frame rate to record important events, record scheduled event in lower frame rate and it allows you to set different frame rates for motion detection record and alarm record.					

Parame	ter	Function					
	Encode mode	 There are three options: H.264(main profile standard, H.264B(baseline standard) encode and MJPG encode. The H.264 and H.264B both are H264 bit stream. H.264 is the Main Profile encode and the H.264B is the Baseline Profile encode mode. H.264B is for Blackberry cell phone to realize the monitor. MJPEG: In this encode mode, the video needs to large bit stream to guarantee the video definition. You can use the max bit stream value in the recommend bit to get the better video output effect. 					
	Resolution	There are multiple resolutions. You can select from the dropdown list. For each resolution, the recommended bit stream value is different.					
	Frame Rate	PAL: $1 \sim 25 f/s$. NTSC: $1 \sim 30 f/s$					
		The frame rate may vary due to different resolutions.					
	Bit Rate Type	There are two options: VBR and CBR. Please note, you can set video quality in VBR mode.					
	Recommended Bit	Recommended bit rate value according to the resolution and frame rate you have set.					
	Bit Rate	 In CBR, the bit rate here is the max value. In dynamic video, system needs to low frame rate or video quality to guarantee the value. The value is null in VBR mode. Please refer to recommend bit rate for the detailed information. 					
	I Frame	Here you can set the P frame amount between two I frames. The value ranges from 1 to 150. Default value is 50. Recommended value is frame rate *2.					
	Watermark	This function allows you to verify the video is tampered or not. Here you can select watermark bit stream, watermark mode and watermark character. Default character is DigitalCCTV. The max length is 85-digit. The character can only include number, character and underline.					
Sub stream	Enable	Please check the box here to enable extra stream function. This function is enabled by default.					
	Bit stream type	General bit stream.					

Parame	ter	Function				
	Encode mode	 There are three options: H.264(main profile standard, H.264B(baseline standard) encode and MJPG encode. The H.264 and H.264B both are H264 bit stream. H.264 is the Main Profile encode and the H.264B is the Baseline Profile encode mode. H.264B is for Blackberry cell phone to realize the monitor. You need to enable the sub stream function in your camera and set the resolution as CIF. Then you can monitor via the Blackberry cell phone. MJPEG: In this encode mode, the video needs to large bit stream to guarantee the video definition. You can use the max bit stream value in the recommend bit to get the better video output effect. 				
	Resolution	There are multiple resolutions. You can select from the dropdown list. For each resolution, the recommended bit stream value				
		is different.				
	Frame Rate	PAL: 1~25f/s, NTSC: 1~30f/s				
		The frame rate may vary due to different resolutions.				
	Bit Rate Type	There are two options: VBR and CBR. Please note, you can set video quality in VBR mode.				
	Recommended Bit	Recommended bit rate value according to the resolution and frame rate you have set.				
	Bit Rate	• In CBR, the bit rate here is the max value. In dynamic video, system needs to low frame rate or video quality to guarantee the value.				
		 The value is null in VBR mode. 				
		 Please refer to recommend bit rate for the detailed information. 				
	I Frame	Here you can set the P frame amount between two I frames. The value ranges from 1 to 150. Default value is 50.				
		Recommended value is frame rate *2.				

4.1.2.2 Snapshot

The snapshot interface is shown as in Figure 4-3.

	۲ F							
WEB SERVICE 43:0				Live	PTZ	Setup	Alarm	Logout
Camera	Video	Snapshot	Overlay		Path			
> Conditions	On such stations

System								
Information								

Figure 4-3

Please refer to the following sheet for detailed information.

Parameter	Function
Snapshot type	There are two modes: general (schedule) and Event (activation).
Image size	It is the same with the resolution of the main stream.
Quality	It is to set the image quality. There are six levels.
Interval	It is to set snapshot frequency. The value ranges from 1s to 7s.

4.1.2.3 Video Overlay

The video overlay interface is shown as in Figure 4-4.

Figure 4-4

Parameter	Function
Privacy mask	 Here you can privacy mask the specified video in the monitor video.
	 System max supports 4 privacy mask zones.
Time Title	 You can enable this function so that system overlays time information in video window.
	 You can use the mouse to drag the time tile position.
Channel Title	 You can enable this function so that system overlays channel information in video window.
	 You can use the mouse to drag the channel tile position.

4.1.2.4 Path

The storage path interface is shown as in Figure 4-5.

Here you can set snap image saved path (I) in the preview interface) and the record storage path

(in the preview interface). The default setup is C:\PictureDownload.

Please click the Save button to save current setup.

> QoS								
Event		Enable ARPIPIng to set in	, address service					
Storage			Default Refre	esh Sav	e			
System								
Information								

Figure 4-7

Parameter	Function			
Host Name	It is to set current host device name. It max supports 32-digit character.			
Ethernet Card	Please select the Ethernet port. It is for the wire LAN by default. Please note for the -W series product, it has the wireless network card, and you can modify the default Ethernet port setup. Please note the device needs to reboot to activate the new setup once you modify the default setup.			
Mode	 There are two modes: static mode and the DHCP mode. The IP/submask/gateway are null when you select the DHCP mode to auto search the IP. If you select the static mode, you need to set the IP/submask/gateway manually. If you select the DHCP mode, you can view the IP/submask/gateway from the DHCP. If you switch from the DHCP mode to the static mode, you need to reset the IP parameters. Besides, IP/submask/gateway and DHCP are read-only when the PPPoE dial is OK. 			
Mac Address	It is to display hose Mac address.			

IP Version	It is to select IP version. IPV4 or IPV6.				
	You can access the IP address of these two version.				
IP Address	Please use the keyboard to input the corresponding number to modify the IP address and then set the corresponding subnet mask and the default gateway.				
Preferred DNS	DNS IP address.				
Alternate DNS	Alternate DNS IP address.				
Enable ARP/Ping set	You can use ARP/Ping command to modify or set the device IP address if you know the device MAC address.				
device IP address service.	Before the operation, please make sure the IPC and the PC in the same LAN. This function is on by default.				
	You can refer to the steps listed below.				
	Step 1 : Get an IP address. Set the IPC and the PC in the same LAN.				
	Step 2: Get the physical address from the label of the IPC.				
	Step 3 : Go to the Run interface and then input the following commands.				
	arp –s <ip address=""> <mac></mac></ip>				
	ping –l 480 –t <ip address=""></ip>				
	Such as: arp -s 192.168.0.125 11-40-8c-18-10-11 ning -L 480 -t 192 168 0 125				
	Step 4: Reboot the device				
	Step 5 : You can see the setup is OK if you can see there are output information such as "Reply from 192.168.0.125" from the command output lines. Now you can close the command line.				
	Step 6 : Open the browse and then input http:// <ip addres="">. Click the Enter button, you can access now.</ip>				

4.2.2 Connection

The connection interface is shown as in Figure 4-8.

			1. A. 20				
WEB SERVIC	≠⊂ ¥3.0		Live	PTZ	Setup	Alarm	Logout
Camera	Connection						
Network TCP/IP Connection	Max Connection TCP Port	10 (1~2 40002 (102	0) 5~65535)

 IP Filter SMTP(E-mail) UPnP 	Ktorroit	Default Refresh	Save				
> SNMP > Bonjour > Multicast							
> WIFI > QoS							
Storage System							
▶ Information							

Figure 4-8

Parameter	Function
Max connection	It is the max Web connection for the same device. The value ranges from 1 to 20. The max connection amount is 20.
TCP port	The default value is 37777. You can input the actual port number if necessary.
UDP port	The default value is 37778. You can input the actual port number if necessary.
HTTP port	The default value is 80. You can input the actual port number if necessary.
RTSP port	The default value is 554. Rtsp streay query format is:
	Main stream: rtsp://username:password@ip:port/cam/realmonitor?channel=1&subtype=0
	Sub stream: rtsp://username:password@ip:port/cam/realmonitor?channel=1&subtype=1
	You need to input the following four items manually.
	Username/password/IP and port.
	The IP is device IP and the port default value is 554. You can leave it in blank if it is the default value.
	You do not need to input the user name and password if you do not need to the verification. Such as:
	rtsp://ip:port/cam/realmonitor?channel=1&subtype=0

4.2.3 PPPoE

The PPPoE interface is shown as in Figure 4-9.

Input the PPPoE user name and password you get from the IPS (internet service provider) and enable PPPoE function. Please save current setup and then reboot the device to get the setup activated.

Device connects to the internet via PPPoE after reboot. You can get the IP address in the WAN from the IP address column.

Please note, you need to go to the IP address item to via the device current device information. You can access the client-end via this address.

Information									

Figure 4-10

Please refer to the following sheet for detailed information.

Parameter	Function
Server Type	You can select DDNS protocol from the dropdown list and then enable DDNS function. The private DDNS protocol means you use your self-defined private protocol to realize DDNS function.
Server IP	DDNS server IP address
Server Port	DDNS server port.
Domain Name	Your self-defined domain name.
User	The user name you input to log in the server.
Password	The password you input to log in the server.
Update period	 Device sends out alive signal to the server regularly. You can set interval value between the device and DDNS server here.

4.2.5 IP filter

The IP filter interface is shown as in Figure 4-11.

You can enable IP filter function so that some specified IP user can access the IPC.

You can add IP address or IP address section.

If you do not check the box here, it means there is on access limit.

> Q08 Event Storage System Information	Interval	0 Second(0~3600) Update Period 60 Mini Email Test Default Refre	ute (1~3600) ish Save				

Figure 4-12

Please refer to the following sheet for detailed information.

Parameter	Function
SMTP Server	Input server address and then enable this function.
Port	Default value is 25. You can modify it if necessary.
Anonymity	For the server supports the anonymity function. You can auto login anonymously. You do not need to input the user name. password and the sender information.
User Name	The user name of the sender email account.
Password	The password of sender email account.
Sender	Sender email address.
Authentication (Encryption mode)	You can select SSL or none.
Title (Subject)	Input email subject here.
Attachment	System can send out the email of the snapshot picture once you check the box here.
Mail receiver	Input receiver email address here. Max three addresses.
Interval	The send interval ranges from 0 to 3600 seconds. 0 means there is no interval. Please note system will not send out the email immediately when the alarm occurs. When the alarm, motion detection or the abnormity event activates the email, system sends out the email according to the interval you specified here. This function is very useful when there are too many emails activated by the abnormity events, which may result in heavy load for the email server.
Health mail enable	Please check the box here to enable this function.
Update period (interval)	This function allows the system to send out the test email to check the connection is OK or not. Please check the box to enable this function and then set the corresponding interval. System can send out the email regularly as you set here.
Email test	The system will automatically sent out a email once to test the connection is OK or not .Before the email test, please save the email setup information.

4.2.7 UPnP

It allows you to establish the mapping relationship between the LAN and the public network.

Here you can also add, modify or remove UPnP item. See Figure 4-13.

In the Windows OS, From Start->Control Panel->Add or remove programs. Click the "Add/Remove Windows Components" and then select the "Network Services" from the Windows Components Wizard. Click the Details button and then check the "Internet Gateway Device Discovery and Control client" and "UPnP User Interface". Please click OK to begin installation.

Enable UPnP from the Web. If your UPnP is enabled in the Windows OS, the IPC can auto detect it via the "My Network Places"

4.2.8 SNMP

The SNMP interface is shown as in Figure 4-14.

The SNMP allows the communication between the network management work station software and the proxy of the managed device. Please install the software such as MG MibBrowser 8.0c software or establish the SNMP service before you use this function. You need to reboot the device to activate the new setup.

WEB SERVIC	E v3.0		Live	PTZ	Setup	Alarm	Logout

 Multicast WiFI QoS Event Storage System Information 							

Figure 4-14

Parameter	Function
SNMP V1	System only processes the information of V1.
SNMP V2	System only processes the information of V2.
SNMP Port	The listening port of the proxy program of the device. It is a UDP port not a TCP port. The value ranges from 1 to 65535. The default value is 161
Read Community	It is a string. It is a command between the manage process and the proxy process. It defined the authentication, access control and the management relationship between one proxy and one group of the managers. Please make sure the device and the proxy are the same. The read community will read all the objects the SNMP supported in the specified name. The default setup is public.
Write Community	It is a string. It is a command between the manage process and the proxy process. It defined the authentication, access control and the management relationship between one proxy and one group of the managers. Please make sure the device and the proxy are the same. The read community will read/write/access all the objects the SNMP supported in the specified name. The default setup is write.
Trap address	The destination address of the Trap information from the proxy program of the device.

Parameter	Function
Trap port	The destination port of the Trap information from the proxy program of the device. It is for the gateway device and the client-end PC in the LAN to exchange the information. It is a non-protocol connection port. It has no effect on the network applications. It is a UDP port not TCP port. The value ranges from 1 to 165535. The default value is 162.

4.2.9 Bonjour

The Bonjour interface is shown as below. See Figure 4-15.

Bonjour is based on the multicast DNS service from the Apple. The Bonjour device can automatically broadcast its service information and listen to the service information from other device.

You can use the browse of the Bonjour service in the same LAN to search the IPC device and then access if you do not know the IPC information such as IP address.

You can view the server name when the IPC is detected by the Bonjour. Please note the safari browse support this function. Click the "Display All Bookmarks: and open the Bonjour, system can auto detect the IPC of the Bonjour function in the LAN.

4.2.10 Multicast

The multicast interface is shown as in Figure 4-16.

Multicast is a transmission mode of data packet. When there is multiple-host to receive the same data packet, multiple-cast is the best option to reduce the broad width and the CPU load. The source host

can just send out one data to transit. This function also depends on the relationship of the group member and group of the outer.

Here you can set multicast address and port. You also need to go to Live interface to set the protocol as Multicast.

Figure 4-18

4.2.12 Qos

The QoS interface is shown as below. See Figure 4-19.

Qos (Quality of Service) is network security mechanism. It is a technology to fix the network delay and jam problem and etc. For the network service, the quality of service includes the transmission bandwidth, delay, the packet loss and etc. We can guarantee the transmission bandwidth, lower the delay, reduce the loss of the data packet and anti-dither to enhance the quality.

We can set the DSCP (Differentiated Services Code Point) of the IP to distinguish the data packet so that the router or the hub can provide different services for various data packets. It can select the different queues according to the priority of the packets and select the bandwidth of the each queue. It can also discard at the different ratio when the broad bandwidth is jam.

Parameter	Function
Alarm output	There is only one output channel. Please click the button 1. If you want to enable the alarm activation output function, please press the corresponding button and then trigger.
Refresh	Search alarm output status.

4.3.3 Abnormity

It includes five statuses: No SD card, capacity warning, SD card error, and disconnection and IP conflict. There are two interfaces for you reference. See Figure 4-27 through Figure 4-31.

Figure 4-31

Parameter	Function
Event Type	 The abnormal events include: no disk, no space, disk error, net error, offline, IP conflict.
	 Threshold: You can set the minimum percentage value here. The device can alarm when capacity is not sufficient.
	 You need to draw a circle to enable this function.
Record	System auto activates channel to record once alarm occurs (For offline type only. See Figure 4-31.).
Record Delay	System can delay the record for specified time after alarm ended. The value ranges from 10s to 300s.

Parameter	Function
Relay Out	The corresponding alarm output channel when alarm occurs. You need to check the box to enable this function.
	Some series product does not support this function.
Relay out Delay	The alarm output can delay for the specified time after alarm stops. The value ranges from 10s to 300s.
	Some series product does not support this function.
Send email	If you enable this function, system can send out email to alarm the specified user.
	This function is invalid when network is offline or IP conflict occurs.

4.4 Storage

4.4.1 Record schedule and snapshot schedule

In these two interfaces, you can add or remove the schedule record/snapshot setup. See Figure 4-32. There are three record modes: general (auto), motion detect and alarm. There are six periods in one day. Please make sure you have enabled the corresponding record mode in the Setup->Storage->Conditions.

You can view the current time period setup from the color bar.

- Green color stands for the general record/snapshot.
- Yellow color stands for the motion detect record/snapshot..
- Red color stands for the alarm record/snapshot.

Figure 4-32

4.4.2 Destination

The destination interface is shown as in Figure 4-33.

It is to set the storage mode of the IPC record file or snapshot pictures. There are three options: local/FTP/network. You can only select one mode. System can save according to the event types. It is corresponding to the three modes (general/motion/alarm)in the Schedule interface. Please check the box to enable the save functions.

Conditions	Default Refresh S	lave				
▶ System						
Information						

Figure 4-37

Parameter	Function
Pack Duration	Here you can select file size. Default setup is 8 minutes.
Pre-record	Please input pre-record value here.
	For example, system can record the four seconds video in the buffer. The record begins from the fifth second.

Disk Full	 There are two options: stop recording or overwrite the previous files when HDD is full. Stop: Current working HDD is overwriting or current HDD is full, it will stop record. Overwrite: Current working HDD is full; it will overwrite the previous file.
Record mode	There are three modes: Auto/manual/close.

4.5 System

4.5.1 General

The general interface includes the local host setup and the date/time setup.

4.5.1.1 Local host

п.

The local host interface is shown as in Figure 4-38.

	CE.

Figure 4-39

Parameter	Function
Date format	Here you can select date format from the dropdown list.
Time Format	There are two options: 24-H and 12-H.
Time zone	The time zone of the device.
System time	It is to set system time. It becomes valid after you set.
Sync PC	You can click this button to save the system time as your PC current time.
DST	Here you can set day night save time begin time and end time. You can set according to the date format or according to the week format.
NTP	You can check the box to enable NTP function.
NTP server	You can set the time server address.
Port	It is to set the time server port.
Update period	It is to set the sync periods between the device and the time server.

4.5.2 Account

Note:

- For the character in the following user name or the user group name, system max supports 6-digits. The space in the front or at the end of the string is null. The valid string includes: character, number, and underline.
- The user amount is 20 and the group amount is 8 when the device is shipped out of the factory. The factory default setup includes two levels: user and admin. You can set the corresponding group and then set the rights for the respective user in the specified groups.
- User management adopts group/user modes. The user name and the group name shall be unique.
 One user shall be included in only one group.

4.5.2.1 User name

In this interface you can add/remove user and modify user name. See Figure 4-40.

B SERVI	CE v3.0				ive	PTZ	Setup	Alarm	Logo

	Add User								

Figure 4-40

Add user: It is to add a name to group and set the user rights. See Figure 4-41.

There are four default users: admin/888888/6666666 and hidden user "default". Except user 6666, other users have administrator right. The user 666666 can only have the monitor rights,.

Hidden user "default" is for system interior use only and can not be deleted. When there is no login user, hidden user "default" automatically login. You can set some rights such as monitor for this user so that you can view some channel view without login.

Here you can input the user name and password and then select one group for current user.

Please note the user rights shall not exceed the group right setup.

For convenient setup, please make sure the general user has the lower rights setup than the admin.
